

Delay of NOWPP Checklist

The following criteria must be met and details included in a request for delay of NOWPP:

- The full UWI location of the well to be considered for delay is included.
- There was 72 hours or less total production in the first production month, as reported in Petrinex.
- 100% of gas production was flared (not tied in) during the first production month, as reported in Petrinex.
- The well was shut in after initial test production of 72 hours or less, as reported in Petrinex.
- The well is now tied in to a new oil battery, and all gas produced is being conserved, as reported in Petrinex.
