June 25, 2024

OneStop Update: Remediation and Reclamation Submissions Now Linked to Asset

Currently, submissions in OneStop for environmental site assessments, records of site condition, and other remediation and reclamation applications for an oil and gas asset are linked to the operator's business associate identification (BA ID) and not to an asset.

Effective with the June 26, 2024, OneStop update, the following submission types will be linked to an asset in OneStop and not the BA ID:

- phase 1 environmental site assessments
- phase 2/3 environmental site assessments
- records of site condition
- reclamation certificate variances
- reclamation certificate applications

Following the change, when an asset is sold or transferred, the new operator can access submissions from the previous operator, saving time and money and reducing duplication of effort, preserving the history of site assessment, remediation, or reclamation work undertaken on the assets.
