\* The above facilities can accept upstream oilfield waste from various sites and various generators

BF = Biodegradation Facility: Enables the removal of hydrocarbon contamination from soil by optimizing environmental conditions for microbial activity.

SFW = Surface Facilities associated with a disposal well (class 1b or 1a): Receiving system for oilfield waste prior to deep well injection.

SFC = Surface Facilities associated with a cavern: Receiving system that enables slurring of oilfield waste into a cavern.

FD= fluid disposal: surface facilities associated with a disposal well (class 1b or 1a) integrated with waste WPF

WPF = Waste Processing Facility: Normally tanks used for purposes such as neutralization of materials, solids processing and hydrocarbon extraction. Facility may also include deep well injection of fluids and cavern disposal.

TS = Transfer Station: Provides short term storage for 3rd party oilfield waste and, if approved, non-oilfield waste which is later

transferred to an appropriate facility for processing.

CT = Custom Treater: Separates oil/water emulsions received directly from well licensees, and treats the oil to meet pipeline specifications. Facility may also include deep well injection of fluids.

WT = Waste Transfer Area: Provides short term storage for 3rd party oilfield waste and, if approved, non-oilfield waste which is later transferred to an appropriate

DFF = Drilling Fluid Facility:

is approved to accept, store, and process drilling fluids (hydrocarbon-based and/or water-based) for the purpose of blending, storage, recycling and re-use by third parties

TW = Truck Wash:

Consists of a wash bay where fresh or produced water (or both) is used in combination with high-pressure washing equipment

TM = Clean Oil Terminal:

The receipt of crude oil and subsequent transfer either by truck or pipeline to a third party for sales

TTF = Thermal Treatment: Remove organic components in oilfield waste by incineration, thermal oxidation, thermal desorption,
