

# AER Update on Imperial Kearl: January 25 – February 1, 2024

Hello everyone,

I hope that the remainder of January has treated everyone well.

Please find the latest information regarding our continued management of Imperial Kearl under the terms of the environmental protection order.

We want to note that, due to current water shortage conditions across the province, the Muskeg River is currently experiencing low flow conditions like 2023. Therefore, it is possible to observe higher concentrations of water quality parameters, such as sulphate and other water quality constituents while low flows persist in the Muskeg River.

If you have any questions, please don't hesitate to reach out.

## AER Highlights

- NODA, WETA, DP4, and WB3 areas were inspected by the AER on January 30
- The AER's next planned site inspection is February 6
- AER SMEs are currently reviewing the following documents:
  - Groundwater Delineation – plan and data for work completed to date under review
  - Update to the Source Control and Containment Plan
  - Conceptual Site Model Interim Report
